Religious and Spiritual Issues in Psychiatric Diagnosis: A Research Agenda for DSM-V

Religious and Spiritual Issues in Psychiatric Diagnosis: A Research Agenda for DSM-V

The relationship between spirituality and mental health has been the focus of growing interest and research over the last decade. However, the implications for psychiatric classification are only beginning to be systematically explored. *Religious and Spiritual Issues in Psychiatric Diagnosis: A Research Agenda for DSM-V* gathers for the first time the collective contributions of the prominent clinicians and researchers who participated in the 2006 Corresponding Committee on Religion, Spirituality and Psychiatry of the American Psychiatric Association. The symposium was an attempt to expand the current DSM text on "Specific Culture, Age, and Gender Features" and "Differential Diagnosis" to include the impact of religious/spiritual factors on phenomenology, differential diagnosis, course, outcome, and prognosis. The philosophical issues at stake in the differential diagnosis of spiritual versus psychiatric conditions are explored at length, as is the case for updating the V Code for a Spiritual or Religious Problem. Two expert commentaries follow each chapter and seek to contextualize and extend the research, analysis, and recommendations presented. Mental health clinicians who seek to practice in a more holistic, integrative manner will find in this unique and important volume the theoretical and practical foundations to support and further their work.
